

Have you ever had Gadolinium based intravenous contrast?

Yes

No

Did you have any reaction to the intravenous contrast, excluding nausea, vomiting, kidney problems, or "passing out?"

Premedication is not necessary.

Yes

No

Did you experience severe shortness of breath, throat swelling, or a reaction that required urgent medical care when you received the intravenous contrast?

Premedication is not necessary

Yes

Do not give Gadolinium. Please contact the MRI department to determine if any alternate and safer imaging test might be able to answer the clinical question.

No

Premedication is required.
